TERTIARY INFOTECH ACADEMY PTE LTD

Activity 09

Evaluate Stability and Capability

Continuous Process Improvement with FMEA · TGS-2021009031

Scenario

After the pilot, Orion has 30 daily solder-paste-volume samples and bridge-defect results.

Objective

Monitor improvement performance using time order, control limits and capability measures.

Deliverable

Time-series dataset, control chart, signal log, capability calculation and evaluation statement

Scenario questions

1. Why can a stable process still be incapable?

2. What does Cpk below Cp reveal?

Submission checklist

✓	Check
■	Workbook complete
■	Formulas retained
■	Evidence and assumptions recorded
■	Questions answered
■	Acceptance criterion applied

Acceptance criterion: Limits are formula-driven, signals are not confused with specification failures, capability is interpreted with stability and measurement caveats.
